

QGIS Application - Feature request #13663

Templated input parameter

2015-10-23 08:41 AM - Giovanni Allegri

Status:	Open	
Priority:	Normal	
Assignee:	Victor Olaya	
Category:	Processing/Core	
Pull Request or Patch supplied:		Resolution:
Easy fix?:	No	Copied to github as #: 21698
Description		
<p>The cases where a raster calculator or a QGIS expression needs to be used inside e model or a script, it can be useful to let the user configure only some parts of the expression. E.g. in an Extract by Attributes algorithm I could have "MYFIELD = X". It would be great if the two strings "MYFIELD" and "X" could be obtained from inputs and interpolated inside a template string like "{0} = {1}".</p> <p>There are various way to design such an input parameter type. This is just a feature request.</p> <p>(If I will find the time I will try to develop some proposals and maybe submit a PR)</p>
