

QGIS Application - Bug report #13671

[2.12] link jump in composer when predefined view are updated

2015-10-25 06:19 AM - pi se

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:		
Affected QGIS version:	master	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: duplicate
Crashes QGIS or corrupts data:	No	Copied to github as #: 21705
Description If a predefined view (for example "orthophoto") is updated in the main windows of qgis, the link with the composer where the predefined view was setting "jump" (it's unchecked). Is it a bug or is it normal. In my case, it's not convenient because the predefined view "orthophoto" on my project is in more than 50 composers on the same project. So, I'm obligated to redo the link on every composer each time I do a modification on a predefined view. Thanks for all, Gladal

Hi,
isn't this a duplicate of "#13418":#13418?
