Revision a98fefd2 - 2016-03-10 10:39 AM - Matthias Kuhn

Merge pull request #2889 from m-kuhn/py3improvements

Simplify some python3 handling, refs #13686 (redmine)

History

#1 - 2015-12-13 10:41 AM - Johannes Kroeger

Same problem here for weeks. There is some related discussion on http://lists.osgeo.org/pipermail/qgis-developer/2015-October/040063.html but it has not been fixed yet. :(

Archlinux, 64 bit.

#2 - 2015-12-16 02:55 PM - Donovan Cameron

On Arch Linux, python version is currently at: python3 (3.5.1), python2 (2.7.11)

#3 - 2015-12-16 03:57 PM - Jürgen Fischer

Donovan Cameron wrote:

And you're using 2.7.11?

#4 - 2015-12-16 05:56 PM - Donovan Cameron

Yea, and these are some of the cmake options.

-DPYTHON_EXECUTABLE=/usr/bin/python2 \\
-DPYTHON_LIBRARY=/usr/lib/libpython2.7.so \\
-DPYTHON_INCLUDE_PATH=/usr/include/python2.7 \\
-DPYTHON_SITE_PACKAGES_DIR=/usr/lib/python2.7/site-packages \\

#5 - 2016-01-20 07:52 AM - Matthias Kuhn

- Status changed from Open to Feedback

Can you verify and update?

At the moment there should be no call to PyUnicode_AsUTF8 with python 2 (only PyUnicode_AsUTF8String)

#6 - 2016-01-20 08:58 AM - Donovan Cameron

Hey Matthias,

Got an error from building qgis (2.13.0.r30691.45d5b1c) using make -j1 and ran a ccache -C before compiling.

#7 - 2016-01-20 02:57 PM - Doug Newgard

I was able to build successfully on Arch. There was a breaking change to scripts/pyuic4-wrapper.sh (commit 7bab2e5036b5679f6dd3c6c7508c97fbde9d9006) that hardcodes a call to "python", but that was well after this report.

#8 - 2016-01-21 02:53 PM - Donovan Cameron

I thought it might be a python hard coded issue. It's happened before =)

There is a Arch Linux system specific workaround here: <u>https://wiki.archlinux.org/index.php/python#Dealing_with_version_problem_in_build_scripts</u> which I haven't tested for this issue.

But I tried to modify/patch that file to hard code it with python2 instead of python, but got the same error. Do you think it's hard coded else where?

#9 - 2016-01-21 03:44 PM - Doug Newgard

It could be, but as I said, it builds for me. I'm not using the PKGBUILD in the AUR, though; instead I adapted my release PKGBUILD. Give it a try instead. https://gist.github.com/Scimmia22/98a2ffcb4f3b405aa0d9

#10 - 2016-01-25 01:02 PM - Donovan Cameron

Compiled fine now Doug, thanks.

I think you mentioned that QGIS finds python2 automagically before in the AUR, so as a note for this report, when these are included as cmake options, the build fails:

-DPYTHON_EXECUTABLE=/usr/bin/python2 \\
-DPYTHON_LIBRARY=/usr/lib/libpython2.7.so \\
-DPYTHON_INCLUDE_PATH=/usr/linclude/python2.7 \\
-DPYTHON_SITE_PACKAGES_DIR=/usr/lib/python2.7/site-packages

#11 - 2016-02-09 03:10 AM - Sandro Santilli

Can this ticket be closed then or what's left to do exactly ?

#12 - 2016-02-09 12:04 PM - Donovan Cameron

- Status changed from Feedback to Closed

I think that it's when a user uses any of the PYTHON cmake options for a custom python (ex, python26, python27, python3) the build defaults to 'python' as the exec.

But in this case, when not building with those options it found the python2 exec and libs automatically.

So maybe when QGIS comes out with python3 support it's possible that this might cause a problem for some systems when they try to specify what version of python to build against, unless the plan is to drop python2 when the transition happens than this can be closed - which I did for now because building QGIS is working now.
