

QGIS Application - Bug report #1377

Attribute table doesn't show any rows after shapefile update

2008-10-24 03:16 PM - jdenisgiguere -

Status:	Closed	
Priority:	Low	
Assignee:	nobody -	
Category:	GUI	
Affected QGIS version:		Regression?: No
Operating System:	Debian	Easy fix?: No
Pull Request or Patch supplied:		Resolution: fixed
Crashes QGIS or corrupts data:		Copied to github as #: 11437
Description		
When I add a feature to a shapefile dataset. I can't see the new feature in the attribute table. If I close the attribute table, I can't see any dat in attribute table. I must remove layer and add it back to get correct attribute table. Step to reproduce: - Open a shapefile containing point (I can give a simple dataset if it is useful) - Open associated attribute table - Make layer editable - Select a point - Copy the point - Paste the point - Look for the duplicate point in attribute table (you won't see it) - Close attribute table - Open attribute table (you won't see any row) I'm using svn trunk r9537 on ubuntu 8.04
