QGIS Application - Bug report #13841
DbManager does not use the new authentication system

2015-11-16 03:37 PM - Sebastian Dietrich

Status:	Closed			
Priority:	Normal			
Assignee:	Sebastian Dietrich			
Category:	DB Manager			
Affected QGIS version:	master	**Regression?:**	No	
Operating System:		**Easy fix?:**	No	
Pull Request or Patch supplied:	Yes	**Resolution:**		
Crashes QGIS or corrupts data:	No	**Copied to github as #:**	21865	

Description

   - When connecting to a database that is using the [new authentication system](#) DbManager asks for username and password instead of using the configured authentication method.
   - When a table/view/query from such a database is added as a layer to the project, the uri for the layer contains username and password instead of the *authcfg*-token.
