Pull Request or Patch supplied:		Resolution: worksforme
Easy fix?:	No	Copied to github as #: 11448
Description Using GRASS edit mode in an old project with many (30+) layers, it can take around 40-50 seconds for QGIS to enter into edit mode. I have read one or two similar complaints in forums where one user reports a problem and others reply it works fine for them. Tried making a new project and adding in the GRASS vector map as well as 2 rasters as backcovers. QGIS entered into GRASS edit mode (with digitizer window etc.) in 2-4 seconds. Problem may relate to size or age of project. I recall Arcview 3.2 had similar issues. CK

QGIS projects are not backwards compatible, so this may be the issue. Please cheack it again with projects produced with 1.0.1: if the problem disappears, please close the bug.

Thanks.
