

QGIS Application - Feature request #13897

entering more than 254 characters into UI text field

2015-11-29 07:32 AM - Thomas Nogatz

Status:	Feedback	Resolution: Copied to github as #: 21919
Priority:	Normal	
Assignee:		
Category:	Unknown	
Pull Request or Patch supplied:	No	
Easy fix?:	No	
Description		
<p>Let's assume we have a shapefile layer with a text field (length: 254 characters). Further we use an UI form to enter some data. If I enter more than 254 characters the text will not be saved at all. The reopened form (after saving) shows an empty field. I have to retype the text again and take care about typing less than 255 characters.</p> <p>This problem only occurs with UI forms. Automatically generated forms work well.</p>

Do you suggest that the too long input would be truncated and the first 254 characters would be saved?
