Operating System:	Debian	**Easy fix?:**	No
Pull Request or Patch supplied:		**Resolution:**	invalid
Crashes QGIS or corrupts data:		**Copied to github as #:**	11450

Description

Hi,
I would appreciate if u tell me I'm running the following error every time I'm starting using QGIS??????
For example while running the folowing simple code:

```
class Map_Application(QtGui.QMainWindow):
   def init(self):
      [[QtGui]].QMainWindow.+init+(self)
      self.setWindowTitle("Display Shapefile")
    self.canvas=QgsMapCanvas()
          self.canvas.setCanvasColor(QtGui.Qcolor(255,255,255))
          self.canvas.enableAntiAliasing(True)
          self.canvas.useQImageToRender(False)
          self.canvas.show()
```

I ran into the following error message:

Runtime Error!
Program: C:\\Python25\\pyhtonw.exe

This application has requested the Runtime to terminate it in an unusual way.
Please contact the applicant's support team for more information.

- Resolution set to invalid

- Status changed from Open to Closed

Hi

This doesn't really look like a bug report. For support better use QGIS dev mailing list: http://qgis.org/content/view/115/96.

Cheers.
