

QGIS Application - Bug report #13956

[Project Properties] certain ellipsoids selected appear changed to another

2015-12-07 11:28 AM - Steven Mizuno

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Project Loading/Saving	
Affected QGIS version:	master	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: end of life
Crashes QGIS or corrupts data:	No	Copied to github as #: 21971
Description		
<p>In Project Properties, General, Ellipsoid choosing certain ellipsoids appear changed to a different one when Project Properties is opened again.</p> <p>example: choose 'WGS84' (note there is no space in the name); on opening Project Properties after OK to the selection, the ellipsoid shown is Clarke 1866, not the one that was selected.</p> <p>However, the ellipsoid selected is saved to the project file.</p> <p>I noticed that the stored (in project file) ellipsoid value is one of the IGNF:ELG... (acronym in tbl_ellipsoid in the srs.db) which apparently aren't recognized by Project Properties when reading the stored value.</p>

- Category set to Project Loading/Saving

I just noticed some previous reports of a similar issue #9767, #10392 when I searched again (missed the closed tickets).

It just occurred to me that the ':' that is in the (IGNF:ELG...) acronyms is used to find the values in the Parameters: choice.

I tried changing the IGNF: acronyms to using an underscore in place of the colon -- this works to retrieve and display the selected ellipsoid.

#2 - 2017-05-01 01:06 AM - Giovanni Manghi

- Easy fix? set to No

- Regression? set to No

#3 - 2019-03-09 04:09 PM - Giovanni Manghi

- Resolution set to end of life

- Status changed from Open to Closed

End of life notice: QGIS 2.18 LTR
