

QGIS Application - Bug report #13972

Categorize symbols uses wrong field after table join

2015-12-10 09:20 AM - Spencer Gardner

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Symbology	
Affected QGIS version:	2.10.1	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:		Resolution: fixed/implemented
Crashes QGIS or corrupts data:		Copied to github as #: 21986
Description <p>I have two layers: Layer A and Layer B. Layer A is a shapefile. Layer B is from an ESRI File Geodatabase. If I join Layer B to Layer A using a common field and then try to categorize their symbols based on the joined field, it uses the values from the first field in Layer B, rather than the field I have selected for categorization.</p> <p>I am testing on 2.10.1, Windows 7 installed via OSGEO4W.</p> <p>Steps to reproduce:</p> <ol style="list-style-type: none">1. Join Layer A to Layer B using a common field, keeping only the field to be categorized2. Open the styling in layer properties for Layer A3. Select categorized styling4. Select the column from the joined table5. Click the "Classify" button <p>What happens:</p> <p>The correct number of classes are created, but the value that is used comes from the first column of the joined table, rather than coming from the joined field selected for categorization. The value appears to correspond to the first found instance of each class in the joined field.</p> <p>What should happen:</p> <p>The classes are populated according to the values in the joined field.</p> <p>I know there have been issues with the FGDB driver in the past using the wrong field for a variety of operations. This may be related but I can't find the relevant bug report at the moment.</p>

- Status changed from Open to Feedback
- Category changed from Attribute table to Symbology

Does this only occur when joining to an ESRI File Geodatabase?

There has been some work done in the joining code (see #14118) recently. Can you test using the nightly build?

Can you attach small sample files to reproduce the error?

#2 - 2016-01-26 06:03 PM - Spencer Gardner

I don't have a nightly build at the moment. Will test when I have some free time but it might be a few days.

#3 - 2016-01-27 01:10 PM - Sebastian Dietrich

If you attach some sample data to reproduce the issue others can test on current master. Then you probably save the hassle of installing a nightly :-)
