QGIS Application - Bug report #14026
DBManager Import layer/file to Oracle not working - Error 8 Loading of the layer failed

2015-12-22 07:16 AM - Armando Forlani

Status:	Closed		
Priority:	Normal		
Assignee:			
Category:	DB Manager		
Affected QGIS version:	2.12.0	**Regression?:**	No
Operating System:		**Easy fix?:**	No
Pull Request or Patch supplied:		**Resolution:**	end of life
Crashes QGIS or corrupts data:		**Copied to github as #:**	22039

Description

QGIS 2.12.0 - DB Manager 0.1.20 - Windows 7 - Oracle 11g 11.2.0.3.0

Import vector layer, shape file as well as a layer (vector) and with every possible combinations of settings, the results are the same:
Error 8
Loading of the layer "myschema"."mytable" failed

It also happens with a previously exported table (as shp) from same db/schema

An inspection of what was actually loaded indicates that only the 'geom' column was created (no other columns where created) on the partially crated table, it is however of UNKNOWN geometry type and the table is empty, user_sdo_geom_metadata record was created correctly ...all of which needs clearing up.

All other operations within DB Manager on existing db tables work correctly.

History

#1 - 2015-12-22 07:24 AM - Giovanni Manghi

- Target version deleted (Version 2.14)

- Priority changed from High to Normal

#2 - 2017-05-01 01:06 AM - Giovanni Manghi

- Easy fix? set to No

- Regression? set to No

#3 - 2019-03-09 03:08 PM - Giovanni Manghi

- Resolution set to end of life

- Status changed from Open to Closed

End of life notice: QGIS 2.18 LTR

Source:

http://blog.qgis.org/2019/03/09/end-of-life-notice-qgis-2-18-ltr/

QGIS 3.4 has recently become our new Long Term Release (LTR) version. This is a major step in our history – a long term release version based on the massive updates, library upgrades and improvements that we carried out in the course of the 2.x to 3x upgrade cycle.

We strongly encourage all users who are currently using QGIS 2.18 LTR as their preferred QGIS release to migrate to QGIS 3.4. This new LTR version will receive regular bugfixes for at least one year. It also includes hundreds of new functions, usability improvements, bugfixes, and other goodies. See the

relevant changelogs for a good sampling of all the new features that have gone into version 3.4

Most plugins have been either migrated or incorporated into the core QGIS code base.

We strongly discourage the continued use of QGIS 2.18 LTR as it is now officially unsupported, which means we'll not provide any bug fix releases for it.

You should also note that we intend to close all bug tickets referring to the now obsolete LTR version. Original reporters will receive a notification of the ticket closure and are encouraged to check whether the issue persists in the new LTR, **in which case they should reopen the ticket**.

If you would like to better understand the QGIS release roadmap, check out our roadmap page! It outlines the schedule for upcoming releases and will help you plan your deployment of QGIS into an operational environment.

The development of QGIS 3.4 LTR has been made possible by the work of hundreds of volunteers, by the investments of companies, professionals, and administrations, and by continuous donations and financial support from many of you. We sincerely thank you all and encourage you to collaborate and support the project even more, for the long term improvement and sustainability of the QGIS project.
