

QGIS Application - Bug report #14037

frequent crash when editing data in relation forms (standard relation form-widget, generated by qgis)

2015-12-25 10:42 AM - Gerhard Spieles

Status:	Closed	
Priority:	Severe/Regression	
Assignee:		
Category:	Relations	
Affected QGIS version:	master	Regression?: No
Operating System:	win	Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: fixed/implemented
Crashes QGIS or corrupts data:	Yes	Copied to github as #: 22050
Description		
<p>When I edit data in in the subform of the standard generated form, qgis often crashes.</p> <p>A jpg that shows a form in edit mode with generated crash and the layer properties of the layer are attached.</p>

Hi, why blocker? it works fine in official qgis releases?

#2 - 2015-12-26 04:50 AM - Regis Haubourg

I would let it as blocker, we encounter such crashes, but they are very difficult to catch and reproduce. We also have some with custom UI forms.

#3 - 2015-12-26 07:19 AM - Gerhard Spieles

In QGIS 2.12.2, crash occurs also (see attached jpg). In 2.12.2 the data in embedded forms are not shown and when you only activate the edit mode in subform, without taking any changes, QGIS ask to save and write a NULL Value in the relation field.

I have tested this behaviour and it seems, that crash and QGIS-asking to save for not taken changes only occurs, when relationreferences with embedded forms are activated. Screenshots of the embedded forms properties and relationdefinitions are attached.

For normal forms with relation and no embedded forms in subform via relationreference, QGIS works fine.

#4 - 2015-12-26 12:00 PM - Gerhard Spieles

In QGIS 2.10, all worked fine without problems.

Hi Gerhard,

It would be really nice if you'd attach a project with data so that the issue is easily reproducible.

All the best

Hi Tudor,

testproject attached.

I have tested with latest master. The crash occurs, when in layer "pflagemassnahmen", properties, fields, in field2 in the relation reference widget is built with an expression (in my case : `nr || ' ', Adat: ' || "auftr_dat" || ' ', Fa: ' || "firma"`). If there is only the field 'nr' chosen, then it seems to work without crash.

Another strange behaviour since 2.12: when you only activate the edit mode in subform, without taking any changes, QGIS asks for saving changes, when you press edit button again.

#8 - 2016-06-22 06:36 AM - Jürgen Fischer

- Subject changed from *qgis crash often editing data in relation forms (standard relation form-widget, generated by qgis)* to *frequent crash when editing data in relation forms (standard relation form-widget, generated by qgis)*

#9 - 2016-06-22 06:37 AM - Jürgen Fischer

- Assignee deleted (Matthias Kuhn)

- Status changed from Open to Feedback

I just tried hard to reproduce the crash with the attached project but I did not succeed.

Is this still an issue?

If yes, can you provide more detailed steps to reproduce (which fields to edit, when to save what...).

#11 - 2016-06-28 04:26 AM - Gerhard Spieles

Hi Matthias,

it seems, that this is still no problem.

Thank you for the work and excuse, that I haven't tested it earlier.

Gerhard

#12 - 2016-06-29 06:14 AM - Andreas Neumann

hm - what means "this is still no problem"?

Do you mean the issue is gone and we can close the issue or are you still experiencing the issues with the current master version?

#13 - 2016-06-29 01:36 PM - Gerhard Spieles

The issue can be closed.

#14 - 2016-06-30 01:07 AM - Nyal Dawson

- Status changed from Feedback to Closed

- Resolution set to fixed/implemented
