<b>Crashes QGIS or corrupts data:</b>	No	<b>Copied to github as #:</b> 22180
<b>Description</b>		
<p>Hello dev,</p> <p>I have made thorough tests for the new External Resource widget and I have found some bugs which are pretty annoying. I have a <a href="#">pending PR</a> for the fix so I will not make a report for each bug but just an abstract of what I have found so far.</p> <ul style="list-style-type: none"><li>- When using External Resource widget, you can't add new values to layer using the widget: values are always discarded (just a return problem).</li><li>- External Resource widget don't store the filter configuration in the project (just a typo in the name of the attribute to store).</li><li>- When the field value is NULL and you are in RelativeStorage mode (whatever mode) and using a Label to display an URL, the relative path is displayed instead of the NULL string (just a return problem).</li><li>- Filter syntax needs to be explained (not so common for a non already Qt developper user): just add a tooltip on the filter LineEdit.</li><li>- DocumentViewerWidth and DocumentViewerHeight are not stored into .qgs project file (just add the two values to widgetfactory writeconfig).</li><li>- RelativeStorage is stored in the project file but it is not correctly read for the configuration (RelativeStorage stores an Int and not a string).</li></ul> <p>Last bug that I've not fixed in <a href="#">the PR</a>:</p> <ul style="list-style-type: none"><li>- Whatever DocumentViewerWidth/Height you put into the widget configuration, image is always distorted to the current size of the control in the form.</li></ul>		

#### History

##### #1 - 2016-01-27 06:11 AM - Médéric RIBREUX

- Resolution set to fixed/implemented
- % Done changed from 0 to 100
- Status changed from Open to Closed

Hello, bug triage...

PR is merged ! No need to get further for the moment !
