QGIS Application - Bug report #14214
Crash at startup on Windows Server 2008 r2

2016-02-02 05:27 AM - Steven Hirsch

Status:	Closed			
Priority:	High			
Assignee:				
Category:	Build/Install			
Affected QGIS version:	2.12.2	**Regression?:**	No	
Operating System:	Windows	**Easy fix?:**	No	
Pull Request or Patch supplied:	No	**Resolution:**	not reproducable	
Crashes QGIS or corrupts data:	Yes	**Copied to github as #:**	22216	

Description

I have tried both 32 and 64 bit versions of the latest release level (2.12.2), plus the 64-bit version of 2.8 LTR. All of them show a fleeting message about "file locked" during installation with no further detail. At startup, they all crash into the Windows error dialog just after "Initializing GUI" appears on the splash box.

I can't really test this scenario. I can't see a reason why QGIS should not install on Windows Server 2008, but maybe is just a not supported platform.

I have seen that you also inquired the users and developers mailing list, without getting much feedback. That is unfortunate.
