Pull Request or Patch supplied:		**Resolution:**	end of life	
Crashes QGIS or corrupts data:		**Copied to github as #:**	22269	

Description

Currently, the textbox beside "Control feature rendering order" is selectable but non editable. It could be handy to have the possibility to quickly type or change the expression inside.

History

Of course this would require to parse the contents and, as done for some text boxes print the text in red if not compliant.

The next step is : should the layer properties dialog validation tools be greyed to avoid user hits them or should the sorting be ignored or disabled if he hits Ok/Apply.

Not sure how this is handled in other expression editable listbox (for labels, style...)

#2 - 2017-05-01 01:06 AM - Giovanni Manghi

- Easy fix? set to No

- Regression? set to No

#3 - 2019-03-09 04:09 PM - Giovanni Manghi

- Resolution set to end of life

- Status changed from Open to Closed

End of life notice: QGIS 2.18 LTR
