

QGIS Application - Bug report #14365

Excessive zoom-in is remembered even if not applied

2016-02-23 09:43 AM - Sandro Santilli

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Map Canvas	
Affected QGIS version:	master	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: end of life
Crashes QGIS or corrupts data:	No	Copied to github as #: 22348
Description		
<p>When zooming in beyond capacity QGIS stops at the max possible zoom but still remembers the user request so that subsequent zoom-out is not immediate but must first consume all the remembered "virtual" zoom.</p> <p>It's a usability issue.</p> <p>By the way, it would be great if it could be capable of zooming in more :)</p>
