<b>Easy fix?:</b>	No	
<b>Description</b>		
<p>Good morning to everyone,</p> <p>When we want to load a table or a view without an integer primary key, we generally use the same name for such a column (id, gid, rank...)</p> <p>We could specify this column name in the settings. If the table does not have an integer primary key, QGIS could use the named column. At last, if this column doesn't exists, the user stil can chose the right one.</p> <p>Mathieu</p>
