

QGIS Application - Bug report #14376

Double-clicking .qgs file opens with no data displayed

2016-02-25 12:02 PM - Eric Ringer

Status:	Closed	
Priority:	Normal	
Assignee:		
Category:	Unknown	
Affected QGIS version:	2.8.2	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:	No	Resolution: end of life
Crashes QGIS or corrupts data:	No	Copied to github as #: 22358
Description		
<p>I am using Mac OS X 10.11.13 and QGIS 2.8.2.</p> <p>In Finder I navigate to the .qgs file I want to open and double click. QGIS opens and the file opens but no data displays. The list layers show up in the layer window including the web baselayer but nothing actually renders. If I instead open QGIS first, then select Project>Open and navigate to the same file, then everything opens as normal. All shapefiles are stored in the same folder as the project file (.qgs).</p>		

History
