

QGIS Application - Bug report #1443

Changed layer saving enhancement

2008-12-02 07:47 AM - Borys Jurgiel

Status: Closed	
Priority: Low	
Assignee: Marco Hugentobler	
Category: Digitising	
Affected QGIS version:	Regression?: No
Operating System: All	Easy fix?: No
Pull Request or Patch supplied:	Resolution: fixed
Crashes QGIS or corrupts data:	Copied to github as #: 11503
Description	
<p>When closing QGIS containing a vector layer in edit mode, no warning is displayed and changes are being lost. The same when the layer is being removed from the legend.</p> <p>I propose to implement one consistent behaviour: If user is closing a layer which contains any unsaved changes (because is either in editing mode or changed by a plugin or the Python Console), a warning message is displayed with three options:</p> <ul style="list-style-type: none">- drop changes- save layer (if supported)- save as shapefile

- Resolution set to fixed
- Status changed from Open to Closed

Fixed in

#2 - 2009-08-07 05:44 AM - Giovanni Manghi

great news, thanks.

I noticed that if it is the case, qgis notices about saving the project before asking to save the changes to a layer. Maybe it is worth to exchange the priority of the two.

Ciao

I thought of that too. However, the user still has the possibility to cancel if asked to save the changes. If he cancels, I assume he hit the button by mistake and also want the layers to stay editable. In this case it is better to ask to save edit changes afterwards.
