Should this be fixed in both 32 bit and 64 bit builds, and both the OSGeo4W installer packages and the standalone QGIS installers, and in the nightlies? I have what seems like it might be the same problem with both QGIS nightly from 64bit OSGeo4W and the 64bit standalone installer, (although the latter may not be the very latest version).

Sorry, no, this must be a different issue, as the environment variable workaround doesn't work.
