Description

Hi guys,

I'd like to know if the following GPS modul is compatible with QGIS V2.12 and supported ?

Dedicated u-blox NEO-M8 GPS Card

It is used on Dell Rugged materials. We tried to install GPS Gaten here's the feedback from the user :

QGIS software is communicating properly with the GPS (It says that the software is "connected" at the GPS system).
It's even possible to see some activity (GPS searching for the signal).
However, the localization does not appear on the SIG maps.

The Equipment is running on W7 Pro.

Many thanks for you help in advance.
Regards
Brice
