Affected QGIS version:	2.10.1	**Regression?:**	No	
Operating System:		**Easy fix?:**	No	
Pull Request or Patch supplied:		**Resolution:**	not reproducable	
Crashes QGIS or corrupts data:	No	**Copied to github as #:**	22471	

Description

When I edit a layer while a definition query is applied and then change the definition query to a different feature, I need to restart QGIS before I can use the edit node tool. I'm assuming this has something to do with the editor only indexing nodes on the first definition query.

In order to recreate the problem edit one feature on a layer with a definition query applied. Save your edits and stop editing session. Then change the query to a different feature and start a new editing session. It will return the error "Node tool: could not snap to a segment on the current layer."

I am running QGIS 2.10.1 64bit on 64bit Windows 7
