

QGIS Application - Feature request #14510

Specifying cell size instead of size when reprojecting and resampling a raster

2016-03-16 05:31 AM - Mattias Lindman

Status:	Open	Resolution: Copied to github as #: 22483
Priority:	Normal	
Assignee:		
Category:	Processing/GDAL	
Pull Request or Patch supplied:	No	
Easy fix?:	No	
Description		
<p>When using Raster/Projections/Warp(Reproject) in order to reproject a raster to a different projection it would be convenient to specify the desired cell size in the resampled raster rather than the dimensions of the raster (through the size option in the GUI).</p> <p>By searching the Internet I learned that it was possible to specify the desired cell size by adding -tr and the desired cell size in the command window at the bottom of the GUI window. To find this out was however not straight forward and it would be more convenient if the GUI provided an option to specify the cell size of the reprojected and resampled raster.</p>
