<b>Easy fix?:</b>	No	
<b>Description</b>		
<p>Enabling and disabling labels is a rapidly used task by most cartographers.</p> <p>For now, to turn labels on and off for a particular layer, you have to open the Layer Properties window, then go to the Labels section, and then choose "No labels/Show labels" in the combobox. It would be way more convenient, if labels for a particular layer could be switched on and off right from the context menu of this layer.</p> <p>Similar work has been done in 2.14, allowing to edit symbols right from the layers panel without going to the properties window, then style section and then choosing a particular symbol to edit. This speeded up map design work significantly on styles with lots of rules.</p> <p>Allowing to turn labels on and off from the context menu should also speed up work a lot.</p>
