

## QGIS Application - Bug report #14637

### Add vector layer includes directory name in the front of the layer and the word 'any' at the end of the layer

2016-04-08 02:52 AM - Wouter Yperman

<b>Status:</b>	Closed	
<b>Priority:</b>	Normal	
<b>Assignee:</b>		
<b>Category:</b>	Vectors	
<b>Affected QGIS version:</b>	2.14.0	<b>Regression?:</b> No
<b>Operating System:</b>		<b>Easy fix?:</b> No
<b>Pull Request or Patch supplied:</b>		<b>Resolution:</b> invalid
<b>Crashes QGIS or corrupts data:</b>		<b>Copied to github as #:</b> 22601
<b>Description</b>		
<p>When I want to import layers using the "add vector layer" button I choose a folder.</p> <p>When the layers are imported each layer has the name of the folder/directory in front of it and the word 'any' added at the back.</p> <p>The layer name is "measurements wall any" instead of "wall"</p> <p>This is extremely annoying since I have to rename every imported layer.</p>		

#### History

##### #1 - 2016-04-09 07:32 AM - Giovanni Manghi

- Operating System deleted (Mac)
- Status changed from Open to Feedback
- Category set to Vectors
- OS version deleted (10.11.4)
- Target version deleted (Version 2.14)

if your vectors are not directory based (example: file geodatabases are directory based, shapefiles are not) then you should not use the "add vector layer" dialog in "directory" mode. You should use the dialog in "file" mode, enter a folder and then choose as many file based datasources in it.
