<b>Affected QGIS version:</b>	2.14.1	<b>Regression?:</b> No
<b>Operating System:</b>		<b>Easy fix?:</b> No
<b>Pull Request or Patch supplied:</b>		<b>Resolution:</b> duplicate
<b>Crashes QGIS or corrupts data:</b>		<b>Copied to github as #:</b> 22675
<b>Description</b>		
<p>You can see the description of the problem and all the tests I have made during last months here:</p> <p><a href="http://gis.stackexchange.com/questions/178684/qgis-server-sending-update-where-null-to-postgis-in-a-wfs-layer">http://gis.stackexchange.com/questions/178684/qgis-server-sending-update-where-null-to-postgis-in-a-wfs-layer</a></p> <p>Finally, Matthias Kuhn, one of the developers of QGIS gave me the key to solve the problem.</p> <p>The WHERE clause is built checking the type of the primary key of the table. It should be an Integer and in some of my tables I saw that the type was Numeric(8,0).</p> <p>Those tables and primary keys were created by a third-party app some time ago.</p> <p>I changed the type to Integer and all the tests I have made since then have worked (I have made more than 100 edition tests via WFS, enough in my opinion to conclude that the problem have been solved).</p> <p>Conclusion: if the primary key of a postgres table is Numeric, the where clause of the WFS-T UPDATE query to Postgis is sometimes null (Where Null) and therefore, nothing is updated.</p>
