Crashes QGIS or corrupts data:		**Copied to github as #:**	11536	

Description

Repeated clicks on Classify button in Layer Property>Symbology>Unique Value produces extraneous classes when dealing with Grass vectors. It seems to be harmless since these extra classes do not render.

History

I cannot replicate this using QGis 1.2 (rev. 11032) under Ubuntu 9.04 with the qgis sample dataset.

Please check it again and leave feedback.
