

QGIS Application - Bug report #14774

Import CSV returns incorrect table

2016-05-05 03:57 AM - Stephen Knox

Status:	Closed	
Priority:	High

Affected QGIS version:	master	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:		Resolution: duplicate
Crashes QGIS or corrupts data:		Copied to github as #: 22731
Description When using master version ca74cc0 the import CSV does not function correctly and gives a table with columns named UID then rows with individual numbers in every column (presumably UID). This is using the without geometry option, I have not tested other options. Reverting back to version 2.14.2 everything works as expected, with the same settings.

I think this is all related to #14766

so probably this one can be closed as a duplicate of that one?
