| Affected QGIS version: 2.12.0 | Regression?: No |
| Operating System: | Easy fix?: No |
| Pull Request or Patch supplied: No | Resolution: |
| Crashes QGIS or corrupts data: No | Copied to github as #: 22744 |

Description

Symptom:

- Open <http://qgis.org/api/2.10/hierarchy.html> and try to use "detail level"
- Then, open <http://qgis.org/api/2.12/hierarchy.html> and do the same.

=> It's not working.

Technical issue

The technical issue is related to a missing jquery.js file (issue tried for 2.12, 2.14 and master API documentation).

To confirm, open a browser and use included Developer Tools debugger from the browser.

Now, visit the following URLs:

- <http://qgis.org/api/2.10/hierarchy.html>
- <http://qgis.org/api/2.12/hierarchy.html>
- <http://qgis.org/api/2.14/hierarchy.html>
- <http://qgis.org/api/hierarchy.html>

The first one does not send an error in the browser debugger console whereas the others return a message about "ReferenceError: \$ is not defined".

It's only the symptom for a missing jQuery file.

You get 404 errors for <http://qgis.org/api/2.12/jquery.js>, <http://qgis.org/api/2.14/jquery.js> and <http://qgis.org/api/jquery.js> whereas the file is available at <http://qgis.org/api/2.10/jquery.js>

It's clearly a regression concerning the API documentation build since 2.12.

I suppose it's related to the Doxygen version and/or the API documentation build process.
