

QGIS Application - Feature request #14872

Create a print composer based on a composer from another project (without a .qpt generated)

2016-05-23 09:20 AM - Harrissou Santanna

Status:	Open	Resolution: Copied to github as #: 22825
Priority:	Normal	
Assignee:		
Category:	Map Composer/Printing	
Pull Request or Patch supplied:		
Easy fix?:	No	
Description		
<p>Currently, one can:</p> <ul style="list-style-type: none">- duplicate a print composer- import items from a template- create a print composer from a saved template <p>What about creating a print composer based on a print composer from another project (without saving it previously)? Something like what's done for embedding layers from another project...</p>
