

## QGIS Application - Bug report #14878

### Setting feature rendering order in 2.5D styling always gets back to default expression and doesn't really apply

2016-05-24 06:39 AM - Nikolay Lebedev

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |           |                                     |

| <b>Description</b>                                                                                                                                                                                                                                                                                                                                                                                                                                                             |           |                                     |
| <p>I've tried to set my custom rendering order (depending on a height field really), but when applying, it always returns to default expression</p> <pre>distance( \$geometry, translate( @map_extent_center, 1000 * @map_extent_width * cos( radians( @qgis_25d_angle + 180 ) ), 1000 * @map_extent_width * sin( radians( @qgis_25d_angle + 180 ) ) ) )</pre> <p>Tried that in both Style dialog and the new map styling dock - same behaviour. Testing on master branch.</p> |           |                                     |

#### History

##### #1 - 2017-05-01 01:05 AM - Giovanni Manghi

- Easy fix? set to No
- Regression? set to No

##### #2 - 2019-03-09 04:10 PM - Giovanni Manghi

- Resolution set to end of life
- Status changed from Open to Closed

**End of life notice: QGIS 2.18 LTR**
