

QGIS Application - Bug report #14902

Kind of Qgis freeze with WMS layer

2016-05-26 08:30 AM - Stéphane Brunner

Status:	Closed	
Priority:	High	
Assignee:		
Category:	Map Canvas	
Affected QGIS version:	master	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch submitted:	No	Resolution: not reproducible
Crashes QGIS or corrupts data:	Yes	Copied to github as #: 22855
Description - Open Qgis - Add WMS server on the URL: http://wms.geo.admin.ch/ - Double click on a layer (tested with 2000-Watt-Areale) - Click on the projection - Select Enable 'on the fly' CRS transformation - Select EPSG:2056 => Don't be able anymore to pan and zoom ...

- Status changed from Open to Feedback

Hi Stephane,

is 2000 the id of the layer? if yes I can't find it in the service you posted, the highest is 1738.

I tested on master with other layers, added them in wgs84 and then at project level enabled OTF to 2056, no issues.

#2 - 2016-05-29 05:24 AM - Stéphane Brunner

- Status changed from Feedback to Open

- The WMS server should be added in the `Browser Panel`
- `2000-Watt-Areale` is the layer name (first in the list)
- We tested on other computer also build in debug mode and we still have the issue...
- A work around it to zoom to layer...

#3 - 2017-03-08 12:46 AM - Giovanni Manghi

- Priority changed from Normal to High
- Crashes QGIS or corrupts data changed from No to Yes
- Category set to Map Canvas
- Status changed from Open to Closed
- Resolution set to not reproducible

I tried again on 2.18.4 on Ubuntu and Windows and it seems is not an issue anymore. Please reopen if necessary.
