

QGIS Application - Bug report #14955

Layer name completion in Virtual Layer query window fails on whitespace

2016-06-04 05:18 AM - Johannes Kroeger

Status:	Open	
Priority:	Normal	
Assignee:		
Category:	DB Manager	
Affected QGIS version:	3.6.0	Regression?: No
Operating System:		Easy fix?: No
Pull Request or Patch supplied:		Resolution:
Crashes QGIS or corrupts data:		Copied to github as #: 22904
Description		
<p>I have a layer named "natural_earth_vector ne_10m_admin_0_countries" from opening the NE sqlite file and selecting that.</p> <p>If I type the beginning of its name in the "Create a virtual layer" Query window, QGIS will suggest to autocomplete to that name properly but on hitting Enter will only enter "natural_earth_vector". This will result in the query failing as there is no such layer.</p> <p>QGIS should instead enter the whole name, enclosed in double quotes.</p>		

History

#1 - 2017-05-01 01:05 AM - Giovanni Manghi

- Regression? set to No
- Easy fix? set to No

#2 - 2017-09-22 10:05 AM - Jürgen Fischer

- Category set to Unknown

#3 - 2019-03-09 04:10 PM - Giovanni Manghi

- Resolution set to end of life
- Status changed from Open to Closed

End of life notice: QGIS 2.18 LTR
