QGIS Application - Bug report #14983
relation editor widget in custom form can cause crash

2016-06-08 10:09 AM - Andrew McAninch

Status:	Closed			
Priority:	High			
Assignee:				
Category:	Unknown			
Affected QGIS version:	master	**Regression?:**	No	
Operating System:		**Easy fix?:**	No	
Pull Request or Patch supplied:	No	**Resolution:**	fixed/implemented	
Crashes QGIS or corrupts data:	Yes	**Copied to github as #:**	22932	

Description

If the qgisRelation property of the QgsRelationEditorWidget is not defined correctly in the .ui file then opening a custom attribute form with a value relation widget causes QGIS crashes. This does not happen in 2.8.9 but does happen in 2.14.3 and master.

I have only tested this on Windows 7, using OSGeo4W 64-bit.

This is possibly related to bug report #14956.

- Status changed from Open to Feedback

Can you check if this is still the case with the latest nightly build?

I think this has been solved with commit:02d80425ac7af14e7c6c2851a20c8d3aebb3770e

#2 - 2016-06-12 09:03 AM - Andrew McAninch

Excellent, problem solved. Thanks!

#3 - 2016-07-03 12:27 AM - Giovanni Manghi

- Resolution set to fixed/implemented

- Status changed from Feedback to Closed

#4 - 2016-08-04 11:57 AM - Andrew McAninch

- Status changed from Closed to Reopened

Can this fix be backported to the LTR? I started doing work on forms again today and found that 2.14.5 is still crashing with a incorrect value relation.
