## Description

I would love to have option **Add Preset...** as part of preset selection in the composer map item properties. The same way as it is in the **Layers** docker.

Why?
In the last few years I created probably few thousands of projects in QGIS. Some percentage contains multiple composers and I did not use presets and tend to forget to use presets for multiple composer maps. I can't find a fast way to find out what layers were on when layers are locked for map item. It would make it really easy when I could add preset with layers active for that locked map item to easily activate that preset in Layers docker and see immediately what layers I used for that map item. Than kyou.
