Easy fix?:	No	**Copied to github as #:**	23061

Description

I sometimes work with projects that have lots of layers and like to setup snapping for individual layers.

That window can be found from **Settings > Snapping options...**

For each layer, they all come turned on and it can take some time to deselect the layers I don't want to have snapping enabled for. Is it possible to add a select all/none toggle button at the top left?

Picture attached for an example.
