Affected QGIS version:	2.14.3		**Regression?:**	No
Operating System:	windows 7		**Easy fix?:**	No
Pull Request or Patch supplied:			**Resolution:**	
Crashes QGIS or corrupts data:	Yes		**Copied to github as #:**	23094

Description

I Installed QGis 2.14 Essen, but when I run it I can see the splashscreen for 2/3 seconds, then it disappears and QGis is not running.
Before I had QGis Lyon installed and working, then I uninstalled it for having the new version QGis essen.
The OS is window 7 64bit, I have also python 3.5.2 installed and anaconda.
I tried to install from standalone version and from OSGeo4W64. Moreover I tried to clen up the old installations, to remove .qgis2 hidden forlder and alll registry entries.

- *Status changed from Open to Closed*

I found out what was the problem. I had recently installed several python environments for testing purposes and the PYTHONPATH environment variable were polluted. Adding ahain to the PYTHONPATH environment variable the canonical paths of QGis python [in my case: E:\\QGis\\apps\\Python27\\Lib;E:\\QGis\\apps\\Python27;] makes the application working again.
