This works correctly when i do it on my computer(kubuntu 6.06, svn version updated 21.06.06). Probably you could post the legend section of the project file so i have a more detailed information what could have happened.

cheers,
Marco

Mmmm...

I can't reproduce the mentioned behavior too now. Perhaps I detected this error at an older rev. With rev 5537 it works correctly on my computer.
