QGIS Application - Bug report #15267
colliding labels

2016-07-12 02:12 PM - Jakub Kosik

Status:	Closed			
Priority:	Normal			
Assignee:				
Category:	Labelling			
Affected QGIS version:	2.14.3		**Regression?:**	No
Operating System:			**Easy fix?:**	No
Pull Request or Patch supplied:			**Resolution:**	end of life
Crashes QGIS or corrupts data:			**Copied to github as #:**	23203

Description

Labels are overlapped on horizontal features (lebeling set to horizontal, but same effect is with "centroid" settings). On vertical features working as expected.

This is rather old bug, but very annoying. One more thing - I have "show all labels (including colliding labels)" checked, these labels must be always visible. If I disable this option - some of labels are not shown, although it's plenty of space inside feature.

History

#1 - 2016-07-12 11:08 PM - Nyall Dawson

- Status changed from Open to Feedback

Can you turn on the "show label candidates" option in the global label preferences (little arrow symbol in the top right of the label dialog) and take a screenshot?

#2 - 2016-07-12 11:46 PM - Jakub Kosik

- File free.JPG added

- File horizontal.JPG added

- File around_centroid.JPG added

here are some exaples with different settings.

#3 - 2017-01-02 07:22 AM - Giovanni Manghi

- Status changed from Feedback to Open

- Priority changed from High to Normal

#4 - 2017-05-01 01:05 AM - Giovanni Manghi

- Regression? set to No

- Easy fix? set to No

#5 - 2019-03-09 03:08 PM - Giovanni Manghi

- Resolution set to end of life

- Status changed from Open to Closed

End of life notice: QGIS 2.18 LTR

Source:

QGIS 3.4 has recently become our new Long Term Release (LTR) version. This is a major step in our history – a long term release version based on the massive updates, library upgrades and improvements that we carried out in the course of the 2.x to 3x upgrade cycle.

We strongly encourage all users who are currently using QGIS 2.18 LTR as their preferred QGIS release to migrate to QGIS 3.4. This new LTR version will receive regular bugfixes for at least one year. It also includes hundreds of new functions, usability improvements, bugfixes, and other goodies. See the relevant changelogs for a good sampling of all the new features that have gone into version 3.4

Most plugins have been either migrated or incorporated into the core QGIS code base.

We strongly discourage the continued use of QGIS 2.18 LTR as it is now officially unsupported, which means we'll not provide any bug fix releases for it.

You should also note that we intend to close all bug tickets referring to the now obsolete LTR version. Original reporters will receive a notification of the ticket closure and are encouraged to check whether the issue persists in the new LTR, **in which case they should reopen the ticket**.

If you would like to better understand the QGIS release roadmap, check out our roadmap page! It outlines the schedule for upcoming releases and will help you plan your deployment of QGIS into an operational environment.

The development of QGIS 3.4 LTR has been made possible by the work of hundreds of volunteers, by the investments of companies, professionals, and administrations, and by continuous donations and financial support from many of you. We sincerely thank you all and encourage you to collaborate and support the project even more, for the long term improvement and sustainability of the QGIS project.
