Pull Request or Patch supplied:		**Resolution:**	fixed/implemented	
Crashes QGIS or corrupts data:	No	**Copied to github as #:**	23325	

Description

First bug report on here so please be gentle...

After switching from 2.14.1 to 2.16.1 adding layers from a certain WFS results in an error, example is with version 1.0.0 forced:

Layer is not valid: The layer srsname='EPSG:28992' typename='app:Bouwvlak'
url='http://afnemers.ruimtelijkeplannen.nl/afnemers2012/services?' version='1.0.0' table="" sql= is not a valid layer and can not be added
to the map

QGIS WFS log:

Analysis of DescribeFeatureType response failed for url srsname='EPSG:28992' typename='app:Bouwvlak'
url='http://afnemers.ruimtelijkeplannen.nl/afnemers2012/services?' version='1.0.0' table="" sql=: Cannot find element 'Bouwvlak'

Guess the problem is in parsing the DescribeFeatureType response, but I do find the element 'Bouwvlak'.

I wrote a bigger article on GIS SE but not sure I should drop it in here as well.
