

QGIS Application - Feature request #15400

Better placement of multiline labels

2016-08-06 02:24 AM - Frits van Veen

Status:	Open	Resolution: Copied to github as #: 23330
Priority:	Normal	
Assignee:	Frits van Veen	
Category:	Labelling	
Pull Request or Patch supplied:	Yes	
Easy fix?:	No	
Description		
<p>This concerns multiline labels which are plotted at an offset from the centroid. The offset is used with regard to the outline of the label. This is fine if a boundary is plotted. If no boundary is plotted the offset should be to the nearest character, so the label can be closer to the centroid.</p> <p>A solution is to calculate multiple outlines for each line and determine from these the optimal placement.</p>
