

## QGIS Application - Bug report #15437

### Ctrl F should not be used to filter layer and its use can lead to real confusion

2016-08-14 09:41 PM - Harrissou Santanna

<b>Status:</b>	Open	
<b>Priority:</b>	Normal	
<b>Assignee:</b>		
<b>Category:</b>	Unknown	
<b>Affected QGIS version:</b>	3.0.0	<b>Regression?:</b> No
<b>Operating System:</b>		<b>Easy fix?:</b> No
<b>Pull Request or Patch supplied:</b>	No	<b>Resolution:</b>
<b>Crashes QGIS or corrupts data:</b>	No	<b>Copied to github as #:</b> 23363
<b>Description</b>		
<p>In attribute table, Ctrl F opens a dialog to search features you'd like to select or filter in the layer.</p> <p>Out of the attribute table, holding Ctrl F opens the Filter provider dialog of the current layer, whose effect is to "remove" from the provider some features.</p> <p>In the first case, you are looking for features; in the other, you filter out from the project some features (I don't think it's a search - which is the common assumption of Ctrl F) and having same shortcut for those two functions (which dramatically do different things) sounds confusing.</p>		

#### History

##### #1 - 2017-05-01 01:03 AM - Giovanni Manghi

- *Easy fix? set to No*
- *Regression? set to No*

##### #2 - 2017-09-22 09:55 AM - Jürgen Fischer

- *Category set to Unknown*

##### #3 - 2018-02-27 06:09 PM - Harrissou Santanna

- *Affected QGIS version changed from 2.16.1 to 3.0.0*
- *Description updated*

Still true on 3.1 (and 2.18)
