

QGIS Application - Feature request #15461

Relation reference widget: introduce unique constraint

2016-08-19 05:13 AM - Andreas Neumann

Status:	Closed	
Priority:	Normal	
Assignee:	Matthias Kuhn	
Category:	Edit widget	
Pull Request or Patch supplied:		Resolution: fixed/implemented
Easy fix?:	No	Copied to github as #: 23387
Description		
<p>In the relation reference widget it is possible to add new values without having to open the linked table first (comfortable).</p> <p>We would, however, like to have a unique constraint on the "display expression"/"display column" to avoid double entries.</p> <p>We need to discuss several options how to achieve this:</p> <p>a) having a separate "value list manager" that takes care of it, but can also handle other stuff, like renaming/deleting values</p> <p>b) Using the existing QGIS constraint mechanism (haven't found a way to check a newly entered value against other already existing values in the table though)</p> <p>c) introducing a new "built in" Unique constraint on a table column</p>

Hi Andreas and Matthias. This seems done in master. Should we close the issue?

#2 - 2017-05-01 12:46 AM - Giovanni Manghi

- Easy fix? set to No

#3 - 2017-06-29 03:59 PM - Andreas Neumann

- Resolution set to fixed/implemented
- Status changed from Open to Closed
- Description updated

closing this, because it is implemented in QGIS 3.x
