

QGIS Application - Bug report #15510

layers naming inconsistencies

2016-09-01 03:53 AM - Giovanni Manghi

Status:	Closed		
Priority:	Normal		
Assignee:			
Category:	Map Legend		
Affected QGIS version:	2.16.1		
Operating System:			
Pull Request or Patch supplied:	No		
Crashes QGIS or corrupts data:	No	Regression?:	No
		Easy fix?:	No
		Resolution:	
		Copied to github as #:	23434
Description			
take this layer			
https://raw.githubusercontent.com/qgis/QGIS/d0faca16a7e63e8bb0e9382c1b7746e1dfc67e2e/python/plugins/processing/tests/testdata/polys.gml			
and add it with the "add vector layer" dialog, or by QGIS browser, or by D&D from a system window.			
In QGIS 2.16.2 by "add vector" layer or D&D you get as layer name			
<i>polys polys2 Polygon</i>			
that seems very strange. By using the browser you get			
<i>polys</i>			
<i>that seems ok</i>			
On the other hand on older QGIS releases (2.8.8) you always get the same name, but that is different from the above ones...			
<i>polys2</i>
