

QGIS Application - Bug report #1561

Choosing missing layer when opening project file places on top of layer list

2009-03-01 12:21 PM - John Tull

Status:	Closed	
Priority:	Low	
Assignee:	nobody -	
Category:	Map Legend	
Affected QGIS version:		Regression?: No
Operating System:	All	Easy fix?: No
Pull Request or Patch supplied:		Resolution: fixed
Crashes QGIS or corrupts data:		Copied to github as #: 11621
Description		
<p>When you have a missing layer when opening a qgs project file, you have the option to find the missing reference file with a dialog. When you choose the correct reference file, instead of keeping the layer/reference file in the same relative position within your layers or "map legend", the layer is promoted to the topmost position. This affects the map canvas by changing the order of your layers. The ideal behavior would be to keep the layer in the same relative position amongst the layers in the map canvas as it is in the qgs project file when opened. I assume this behavior is the same across platforms, but I've only tested on OS X.</p>

History

#1 - 2009-07-10 05:41 AM - Giovanni Manghi

I confirm that it behave the same on linux and windows too. Used qgis 1.2 from trunk.

#2 - 2009-08-13 05:16 AM - Magnus Homann

- Resolution set to fixed

- Status changed from Open to Closed

Fixed in commit:6bff6a69 (SVN r11364).
