Description

In QGIS 2.14 on Mac I could access SAGA through the Processing toolbox. Now in 2.16 I can't. The path to the SAGA binaries is the right one and it is activated. Still no SAGA. But if I replace the binary saga_cmd from my old 2.14 app into the 2.16 then SAGA is activated and shown in the Processing toolbar. But the functions doesn't work (Segmentation fault: 11)...
