Crashes QGIS or corrupts data:		**Copied to github as #:**	10216	

Description

When you open the Add a Raster Layer Dialog: 'Open a GDAL supported Raster Data Source' the 'Files of Type' drop down defaults to select 'AIG GRASS All other files', but the display is actually showing all the [[GeoTiffs]], not 'all files'. In order to see all files I need to select something else in the list and then re-select the AIG GRASS All other files item from the drop down.

Very minor bug, but a bug none the less.

History

#1 - 2006-07-14 03:39 PM - Gavin Macaulay -

This is caused by a bug in Qt, and appears to be fixed in 4.1.4 on Linux.

Could someone test on Windows with Qt4.1.4?

#2 - 2006-09-18 02:49 PM - Gavin Macaulay -

- Resolution set to fixed
- Status changed from Open to Closed

Appears to be fixed in 0.8 windows preview2

#3 - 2009-08-22 12:46 AM - Anonymous

Milestone Version 0.8 deleted
