

QGIS Application - Feature request #15702

Image metada (GDAL) does not show compression information of an image

2016-10-13 08:18 AM - Andreas Neumann

Status: Closed	
Priority: Low	
Assignee:	
Category: Rasters	
Pull Request or Patch Supplied: Yes	Resolution:
Easy fix?: No	Copied to github as #: 23625
Description	
<p>It would be useful if the "Layer Properties" --> "Metadata" --> "Properties" text would include information on compression.</p> <p>E.g. a GeoTIFF can have many different compression methods, with different effect on file size and speed.</p> <p>It would be good if the image metadata would reveal this information.</p> <p>gdalinfo does reveal the compression information - see fe. this output:</p> <pre>----- Image Structure Metadata: COMPRESSION=DEFLATE INTERLEAVE=BAND -----</pre>
