

QGIS Application - Bug report #15813

UnicodeDecodeError when switching project

2016-11-04 05:14 AM - Adam Szieberth

Status:	Closed
Priority:	Normal
Assignee:	
Category:	Unknown
Affected QGIS version:	2.18.0
Operating System:	Windows
Pull Request or Patch Supplied:	
Crashes QGIS or corrupts data:	
Regression?:	No
Easy fix?:	No
Resolution:	end of life
Copied to github as #:	23733

Description

When I switch between two projects (both has accented characters in filepath) I get the following error dialog:

Hiba történt a következő kód végrehajtása közben:

```
sys.path.remove(u'Z:/munkáink/2016/2.04 humuszos termőréteg mentése/véleges kivonás/harkány 0276-71 hrsz véleges  
(albrecht ferenc) 105-16/qgis'); sys.path.append(u'Z:/munkáink/2016/2.04 humuszos termőréteg mentése/véleges  
kivonás/túrony 023-6 hrsz véleges (molnár attila) 104-16/qgis')
```

Traceback (most recent call last):

```

The pickled formatwarning arguments are in the attachment.

They are the following:

```
[UnicodeWarning('Unicode equal comparison failed to convert both arguments to Unicode - interpreting them as being unequal'),
<type 'exceptions.UnicodeWarning'>, u'__main__', 1]
```

Feeding them to warnings.formatwarning yields no error:

```
>>> import warnings
>>> warnings.formatwarning(*formatwarning_args)
u'__main__:1: UnicodeWarning: Unicode equal comparison failed to convert both ar
guments to Unicode - interpreting them as being unequal'
'
```

Please put the ticket in "feedback" status when needed (is not the first time I ask you to follow this simple rule, thanks).

End of life notice: QGIS 2.18 LTR

Source:

<http://blog.qgis.org/2019/03/09/end-of-life-notice-qgis-2-18-ltr/>

QGIS 3.4 has recently become our new Long Term Release (LTR) version. This is a major step in our history – a long term release version based on the massive updates, library upgrades and improvements that we carried out in the course of the 2.x to 3x upgrade cycle.

We strongly encourage all users who are currently using QGIS 2.18 LTR as their preferred QGIS release to migrate to QGIS 3.4. This new LTR version will receive regular bugfixes for at least one year. It also includes hundreds of new functions, usability improvements, bugfixes, and other goodies. See the relevant changelogs for a good sampling of all the new features that have gone into version 3.4

Most plugins have been either migrated or incorporated into the core QGIS code base.

We strongly discourage the continued use of QGIS 2.18 LTR as it is now officially unsupported, which means we'll not provide any bug fix releases for it.

You should also note that we intend to close all bug tickets referring to the now obsolete LTR version. Original reporters will receive a notification of the ticket closure and are encouraged to check whether the issue persists in the new LTR, **in which case they should reopen the ticket**.

If you would like to better understand the QGIS release roadmap, check out our roadmap page! It outlines the schedule for upcoming releases and will help you plan your deployment of QGIS into an operational environment.

The development of QGIS 3.4 LTR has been made possible by the work of hundreds of volunteers, by the investments of companies, professionals, and administrations, and by continuous donations and financial support from many of you. We sincerely thank you all and encourage you to collaborate and support the project even more, for the long term improvement and sustainability of the QGIS project.
