

QGIS Application - Feature request #15870

Don't remove defect or unavailable layers at project load

2016-11-21 05:24 AM - Simon Gröchenig

Status:	Closed	Resolution: Copied to github as #: 23788
Priority:	Normal	
Assignee:		
Category:	Project Loading/Saving	
Pull Request or Patch supplied:	No	
Easy fix?:	No	
Description		
<p>Currently, QGIS checks all layers during loading a project. It detects defect layers (data source like db or file is not available or somehow wrong) and gives the user the opportunity to repair the layers. If the user is not able to do so, the affected layers are removed from the project.</p> <p>Hereby, I request to keep those layers. I don't like to lose the styling, links to other layers and other configurations which take much time to rebuild.</p> <p>If for example a PostGIS-layer disappears while the QGIS-project is open, simply no data is shown. I think, there is no disadvantage to do the same for layers which are unavailable at project start up.</p>
